About Entrinsik

Since 1984, Entrinsik has worked specifically within the Continuing Education, Seminar, and Conference industries as participants, consultants, and software developers. Drawing on 30 years of best practices experience with a customer-centric approach, we constantly invest in and update our products to be the best registration, course management, e-commerce and reporting software in today's market.

Customer centric, best practices
non-credit registration software

Entrinsik's Enrole hosted system is a dynamic hub of intuitive and agile software running your entire department. There is a fully loaded suite of functions you will either grow into or never outgrow, coupled with an exceptional and affordable pricing model. We also offer customizations to suit your unique requirements. Our full-service hosted software eases your I.T. resource burden for a fraction of the cost, leaving you to focus on a clickable, hyperlinked interface with vast flexibility for your admin staff.

Enrole is specifically designed for:

Imagine your best customer service yet! From small lifelong learning departments to multi-million dollar seminar and conference producers, our registration processing, event planning, course creation, and real-time reporting solution will help you make data driven decisions faster. We incorporate extensive fieldwork and leverage 30 years of best practices experience to deliver software solutions to non-credit/non-traditional organizations just like yours.

Admin Staff User Perspective

The interactive user dashboards, with clear quadrant design, quickly identifies upcoming classes/events and seat availability, recent registrations, and pending tasks assigned to the user. Register many attendees for multiple classes in one go and apply relevant discounts at checkout. Transform event creation with an intuitive step-by-step guide through setup of classes, and all details dynamically appear in your Online Shopping Cart without duplicate entry.

- Track attendance, CEUs, contact hours and grades.
- Assign pre-requisites, substitutions, cancels, transfers and manage waitlists.
- Quickly copy forward courses and sessions and view revenue and expenses for class profitability overview.
- Automate receipts, invoices, confirmations & attachments.
- Built-in security framework regulates end-user permissions and group access.
- In screen context-sensitive help enables quick adoption and increases ease-of-use in the system.

Online Shopping Cart

The Shopping Cart is your organization's face to your customers, and Enrole makes it easy to present a branded, easy-to-use shopping experience for your students and attendees. Enrole dynamically populates your course catalog with no duplication of effort and indexes your offerings, enabling customers to search via keyword, instructor, calendar, or category.

- Dynamic, branded, mobile-responsive shopping cart with enhanced SEO and integrated Google Analytics. Customize display headings and vocabulary to suit your customer base.
- Talk to us about integrating your LMS and web media/material delivery with direct links to login and begin learning.
- Enable your customers to view course information, registration fees, availability, narrow their search with multiple filters, and signup or remove from waitlists. Your customers browse and buy quickly and securely with PCI v3.1 compliant processing.
- Self-service customer profiles show transcripts, track order history, and download/print certificates of attendance.
- Amazon-style auto-suggestions after checkout with option to add the purchased class schedule to their calendar, or add additional breakout sessions and products at a later date.
- Collect course specific information by creating your own user-defined fields. Place multiple registrations in one transaction, set minimum deposit amounts, immediate order receipts, and fully automate confirmation emails.

Informer Reporting & Dashboard Visualizations

Entrinsik's award winning reporting, analytical and charting solution is part of the Enrole total solution platform empowering administrative users through a self-service interface providing drag and drop column functionality and in-place editing. Dashboards allow non-technical users to visually explore data by creating customized charts and graphs based on report results with instant drill down into screen information.

- Create your own columns to derive new values using existing data fields, just like excel - but in real-time.
- Ad-hoc data analysis including charts, drill downs, interactive sorting, grouping and aggregate data summaries.
- LIVE excel output feature serves up real-time data to Excel, responding to instantaneous data changes.
- Schedule reports to run direct data to email and automate sending out various correspondences.
- Utilize or modify the included report bundle, or create an unlimited number of your own reports.
- This alternative solution to traditional BI will address the shrinking time-to-decision ratio for highly dynamic businesses.

Custom Training & Client Portal

Lighten your staff workload and enable your corporate client administrators to add existing and create new employees with one-click registration and cancellation. The corporate client will see past and upcoming custom training classes, view attendee lists, and download additional resources and links, all while keeping track of employee progression and attendance.

Instructor/Admin Portal

A specifically designed utility for instructors or speakers to self-manage biographical and contact information, view past and upcoming classes, print rosters/attendee lists, and communicate with attendees via email. Other functions include recording attendance hours, issue education units, and give grades. Office Administrators utilize the same application for recording attendance, verifying information, and closing the class.

Administration

Manage administrative options, configuration, system maintenance and self-customize vocabulary for your online shopping cart and portals from a single application. Add thumbnail images to your cart pages, downloadable PDF documents, other resources, videos & google map URL links. Temporary notification/emergency bulletins can be added to the home page with all data updated in real-time.

Check-In Kiosk

Transform a name badge or membership card into a barcoded information holder to check in attendees from a remote site with a barcode or QR scanner and record attendance over multiple classes and/or days. Benefits include an instant view of any outstanding balances, break-out sessions, and a record of arrival date and time. Exit times could also be scanned for calculating mandatory attendance hours.

Customizations

Enrole provides an independent test environment to ensure that any changes or modifications are accurate and thoroughly tested prior to applying to your live environment. It is important to understand and utilize the native features and functions of the system as they were designed, and User Defined Fields will enable self-customization. Custom programming to achieve additional and specific goals will be agreed with your project manager.

Correspondence

Automate customer correspondences to confirm enrollment, cancellations, and changes. Send transcripts and dynamic PDF certificates for completing a session or certification program. Outline the mode of sending, define rules for sending, and create the merged field templates, just once. Auto-send correspondence by email, attach dynamic PDF invoices, and resend/reprint anytime.
